Roll No: 02

Chart-1

Regional comparison

- Q1 2026

- * In the chart there are four cities. Comparing sales across four cities. In that four cities Madurai has the highest sales, while Srirangapatna has the lowest.
- * Partially I trust this one because the values are starting from 360 instead of 'Zero' (0). Which makes the difference.

Chart-2

Budget Allocation by Department

- * Chart 2 is showing how the budget is distributed among the 11 categories.
- * I didn't trust it fully why because the given chart has no departmental percentages, or values so it makes difficult to understand the budget allocation.

chart - 3 ÷ Organic Food sales vs. Autism Diagnosis

* chart 3 shows that organic food sales and autism diagnosis increase over the given time period.

* No the chart may create a false impression of a relationship, increasing together does not mean one causes the other. It also uses two different y -axes

chart - 4 ÷ coffee cups / Day vs. Typing Speed

* chart 4 tries to show the relationship b/w daily coffee consumption and typing speeds.

* Not fully. The points are widely scattered showing no strong relationship b/w coffee consumption & typing speed.
